The Thrid session(Introduction to the Full Stack Development)

The Fourth Session(Introduction Basics of AI & ML)

THE Fifth session (GAMES)

SUMMARY OF INDUSTRIAL VISIT

The first session(Introduction session):-

the first session was about introduction about the there and they explained about how they run a international company called

sales force and they explained there history and background of there and the services they provide to there clients and MR.SOHEL

gave us a brief information about there on going projects and introduces to his team members and this completes the introduction session

The second session(Introduction to SDLC):-

the second session started after 10 mintunes after the introduction

session .The second session consisted of topics such as SDLC where

one of the senior developer matten sir gave an very interesting summarization about SDLC and its phases where matten.sir gave

brief explanation about these phases such as requirements gathering ,designing ,development,testing, maintaing and how these phases work partically by giving us real life examples such how SDLC works while developing banking sector.and Matten.sir also cleared all doubts of students related to the full stack development as well as job and career related doubts .And explained how AI plays a very important role in development of the application .Matten sir carries great knowledge about AI&ML and python and he has been working from past 8 years i the arlig technologies.the 2nd session ends here

The third session(Introduction to the core of the fullstack development):-

the third session of the industrial visit started just after completion of the second session . This consisted of core of the full stack development topics . Sir told us about how a company bulit' sits website from strarch and how companies bulit' s its template which modified later on .And sir .gave us a brief information what are most popular languages they use for front end development and designing the website and sir .gave information about the tools they use for and explained how they

use Figma for designing the UI/UX of a application and sir gave us hint about how backend of website is built and managed by the companies .and sir demonstrated the front and backend ,api' s using an actual website .the 3rd session ended here

The fourth session(Introduction basics of AI & ML):-

the 4th session of the industrial visit the 4th session started a bit late after the completion of the 3rd session .lead by sir .they started with themselves to us and what role they play in company

sir .Explained about core of AI models into their currently developing projects .and then sir explained how a machine is trained by giving the example of google lens and chatgpt .and sir .provided all necessary knowledge about AI&ML algorithm

The fifth session (Games):-

the 5th of the industrial visit started right after the completion of 4th where Arlig technologies team came up with idea to make the session more interesting so they came with brand guessing game

where we have to guess the logo of the famous brands through emojis the 5th session was trying guess logo using emojis it consisted brands like McDonald' s .playstation,redBull.It gave a refreshment and some unique experience to students as well as

team members too..... so the 5th session went really great . The
arlig
technologies team members said there thanks to the students
for
guessing the brand through emojis .. The 5th session ends here

Conclusion:

In conclusion, Arlig Technologies has demonstrated a commendable track record in both product delivery and marketing performance. The company's expertise in Full Stack and Salesforce projects, spanning various clouds, is underscored by a commitment to technical excellence, client satisfaction, and a forward-thinking approach. Arlig's marketing strategies, centered around thought leadership, client success stories, digital presence, strategic partnerships, and continuous improvement, position the company as a dynamic force in the IT solutions landscape. As the company continues to evolve, its dedication to innovation and client-centric solutions remains unwavering, solidifying its standing as a go-to partner for businesses seeking transformative digital solutions.
